Sciurognathi, Muridae, Murinae, Mus.
                     Clontech's Capfinder cDNA Library Construction Kit (Clontech) according to the manufacturer's protocol and clond into EcoRi digested Lambda Zap II vector and Strategene). The phage library was amplified once prior to in vivo excision in SOLR cells. Individual colonies were grown, and the CDNA inserts were sequenced in high throughput (NIH intramural sequencing center http://www.nisc.nih.gov/).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

/note="Organ: pancreas; Vector: pSPORT1 (GIBCO); Site_1:
Not I; Site_2: Sal I; The library was prepared by
Catherine S. Lee and has not been published. The pancreas
was obtained from Gerard Gradwohl (PNAS 97 P1607-1611,
2000). The cDNA's were prepared with an oligo containing a
NotI site, and Sall linkers were added to the ends. The
inserts were cut with NotI before being cloned into the
NotI-Sall sites in the vectors. This is one of two
libraries, ngn3 wt and ngn3 -/-. The wt library is in
pSPORT1, T7 promoter is 5'."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                            The invention relates to a novel isolated human kinase. The kinase peptides and nucleic acids are useful as models for the development of human therapeutic targets, in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic gents that modulate kinase activity in cells and tissues that express the kinase.

The proteins can be used to raise or to elicit another immune response, as a reagent in assays designed to determine the levels of the protein in blological fluids, as markers for tissue in which the corresponding protein is preferentially expressed, in the identification of modulators of the peptides and in pharmacogenomic analysis. The nucleic acids are useful as hybridisation probes, in constructing vectors, host cells or transgenic animals expressing all or a part of the nucleic acid, for monitoring the effectiveness of modulating compounds on the expression or activity of the transporter gene in clinical trials or in treatment regimen, in gene therapy and as antisense constructs to control transporter gene expression in cells, tissue and organisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human kinase proteins and nucleic acids encoding them all of which are useful in the development of human therapeutics and diagnostic composition and methods. The invention is useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents. The invention is also useful in drug screening assays, in assays to determine the biological activity of the protein, to raise antibodies and to elicit another immune response. The antibodies are useful in pharmacogenomic analysis, for inhibiting protein function and for tissue typing. The transgenic animals are useful for studying the function of kinase protein, identifying and evaluating modulators of kinase protein, identifying as used in gene therapy. The present sequence is the human kinase cobnà. The human kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated human kinase proteins, useful as models for developing human therapeutic targets, or for treating a disorder associated with an absence of, inappropriate or unwanted expression of the protein, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a kinase polypeptide and its encoding polynucleotide. The polypeptide and polynucleotide of the invention are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The invention is also useful for biological assays related to kinase, in drug screening assays, for treating disorders characterized by an absence of inappropriate and unwanted expression of the protein. The present sequence is human kinase cDNA. The human kinase gene is located on chromosome 12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated human kinase proteins and nucleic acids, useful for developing human therapeutic targets, identifying therapeutic proteins eserve as targets for the development of human therapeutic agents that modulate kinase activity.

```
The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorders include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, Hodgkin's disease) immune disorder (Acquired Immune Deficiency Syndrome (AIDS), asthma, Addison's disease, atherosclerosis, ansemia, allergies, adult respiratory distress syndrome, atherosclerosis, activities, crohn's disease, diabetes mellitus, multiple sclerosis, Good pasture's syndrome, graves' disease, osteoarthritis, osteoporosis, pancreatitis, Crohn's disease, diabetes chemmatodia rathritis, Sjogram's syndrome, uveitis, ulcerative colitis, contentation, slogram's syndrome, uveitis, ulcerative colitis, contentation, viral, protozoal and helminthic infections) contentating's syndrome, hypothyroidism, cerebral palay, astarateds; cardio cyascular disease (arteriovenous fistula, hypertension, vasculitis, congestive heart failure, angina pectoris, myocarditis, aneurysms, congestive heart failure, angina pectoris, myocarditis, congestive heart failure, angina pectoris, myocarditis, consensing toxicity of a ischaemic heart disease, chronic bronchitis, the present sequence is human provent and a in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        241 AAGTATTCCGACACCATAGCTGAGTTACAGGAGCTCCAGCCTTCGGCAAAGGACTTCGAA 300

The present sequence encodes a human citron rho/rac-interacting kinase-short kinase polypeptide. The polymucleotide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases associated with the polypeptide dysfunction. The expression vector or the reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a disease, such as obesity or chronic obstructive pulmonary disease. These may also be used for treating obesity/ overweight-associated comorbidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, gallbladder disease, gout, osteoarthritis, sleep apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human citron rho/rac-interacting kinase-short kinase polypeptide and polymuclectide for preventing or treating diseases associated with the polypeptide dysfunction, e.g. obesity or chronic obstructive pulmonary disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disease;

Craim 1; Fig 1; 145pp; English.

XX
Crass polymocleotide and polymocleotide and polymocleotide of the short kinase polymocleotide dysfunction. The expression vector or the cagent is useful in the preparation of a medicament for modulating the creating ty also be used for treating obsestivy overweight associated controlatines, such as obsestivy or chronic obstructive pulmonary disease.

CC may also be used for treating obsestivy overweight associated combidities, such as hypertension, diabetes, coronary artery disease, comorbidities, such as hypertension, diabetes, coronary artery disease, comorbidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, gallbladder disease, gout, osteoarthritis, sleep CC apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced XX

New human kinase polypeptide, for diagnosing, preventing and treat cancer, immune system disorders, growth and development disorders cardiovascular disorders and lipid disorders.

5; Page 207-209; 210pp; English. Claim

The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, treating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disorder (e.g., acthma, atherosclerosis, multiple sclerosis, psoriasis), disorders affecting growth and development (e.g., arteriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Hypertlipidemaia, obesity), and a lipid disorder (e.g., fatty liver, Goodpasture's disease, Niemann-Pick's disease, hypercholesterolaemia, chosily, and a lipid disorder (e.g., fatty liver, Goodpasture's disease, wiemann-Pick's disease, hypercholesterolaemia, compounds Anti-PKIN antibody is useful in a disponseic test for a condition or a disease associated with the expression of PKIN in a should a suspending a disease or condition associated with decreased or increased expression of functional PKIN.

The present into asseribes Nova process, where A can be 1 to 35 described above and a carrier; (2) a kit comprsising in one or more described above and a carrier; (2) a kit comprsising in one or more containmers, the composition described above; (3) an isolated nucleic acid molecule which encodes a NOVX procein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell comprising the nucleic acid molecule described above; (5) a cell comprising the nucleic acid molecule described above; (5) a cell comprising the above vector; (6) an antibody that immunospecifically brinds to the polypeptide described above; (7) methods for determining the presence of or predisposition to a disease associated with altered levels of expression of the above collypeptide or nucleic acid molecule in a first mammalian subject; (9) a disease associated with altered levels of expression of the polypeptide or nucleic acid molecule in a first mammalian subject; (9) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an aberrant expression or a berrant physiological interactions of the polypeptide; (11) a method of corrections of the polypeptide; (11) a method of corrections of the polypeptide; (11) a method of corrections or preventing a pathology associated with the above polypeptide; NovX asquences have antidiabetic, anorectic, antibacterial, virucide, and and antilipaemic activities, and can be used in gene therapy. The collypeptide is useful in manufacturing a method corrections, captometring a metabolic corrections, captometring a syndrome associated with a human disease. The polypeptide or the nucleic acid molecule may be used to diagnose, treat or prevent metabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Dipippo VA;

1266 1326 1213 1273 1333 1386 1153 1393 may for gene The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine Kinases, particularly Citron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides have a use in gene therapy. The encoded novel polypeptides are useful Human; kinase; enzyme; serine-threonine kinase; nootropic; cytostatic; Citron rho-interacting kinase; gene therapy; mental disorder; cancer; CCTGCCAAGACTAGCTCCATGGAAAAGAAACTTCTCATCAAAAGGAAAGAGCTACAAGAC 1334 CCTGCCAAGACTAGCTCCATGGAAAAGAAACTTCTCATCAAAAGCAAAGAGCTACAAAAGA 1094 TCTAAAATTGACTGGAACAACATTCGTAACTCTCCCCCCCTTCGTTCCCACCCTCAAG TCCGACGATGACACCTCCAATTTTGATGAACCAGAGAAGAATTCGTGGGTTTCATCCTCT 1154 TCTGACGATGACCTCCAATTTTGATGAACCAGAGAATTCGTGGGTTTCATCCTCT CCGTGCCAGCTGAGCCCCTCAGGCTTCTCGGGTGAAGAACTGCCGTTTGTGGGGTTTTCG 1214 ccgreccaecreaeccercaecerreresegreaagaacreccerrreresegrirres TACAGCAAGGCACTGGGGATTCTTGGTAGATCTGAGTCTGTTGTGTCGGGGTCTGGACTCC 1274 TACAGCAAGGCACTGGGGATTCTTGGTAGATCTGAGTCTGTTGTGTGGGGTCTGGACTCC Novel polynucleotide encoding human proteins that are structurally similar to animal kinases, useful for drug screening, diagnosis, in therapy of disorders and diseases e.g. cancer and pharmacogenomic applications.

                           Alzheimer's disease
```

The invention relates to an isolated polyphocitice and number of circon rho/rac-interacting kinase polypeptide. The isolated polymucleotide comprises a 6165 or 8603 base pair sequence, given in the polymucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human circon rho/rac-interacting kinase (CRIKI)

polypeptide and polymucleotide are useful in preventing, ameliorating or treating diseases associated with human CRIK dysfunction such as obesity associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breat, prostate and colon cancer).

CC cancer including endometrial, breat, prostate and colon cancer, of isoacers, anxiety disorders, Parkinson's disease or Alzheimer's cancer including contractive pulmonary disease, or diabetes. These can disoase, critoric obstructive pulmonary disease, or diabetes. The human CRIK polypeptide is also useful in diagnostic assays or in genetic testing.

The expression vector or the reagent is useful in preparing a medicament of modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a CRIK polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and in solymucleotide sequence represents a DNA sequence relating to the human CRIK protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly Citron the-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polymucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NMP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated polynuclectide encoding a human citron rho/rac-interacting kinase polypeptide. The isolated polynucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK) polypeptide and polynucleotide are useful in preventing, ameliorating, creating diseases associated with human CRIK dysfunction such as obesity and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breast, postere and colon cancer), anorexia, cachexia, bullimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, Parkinson's disease or Alzheimer's disease, chronic obstructive pullmonary disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK polypeptide is also useful in disgnostic assays or in genetic testing. The expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a

The invention relaters to an institute parymentolite incolling a numbar citron rho/rac-interacting kinase polypeptide. The isolated polymucleotide comprises a 6165 or 8603 base pair sequence, given in the polymucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK) or polypeptide and polymucleotide are useful in preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breast, prostate and colon cancer).

CC anorexia, cachexia, bulimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, parkinson's disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK polypeptide is also useful in diagnostic assays or in genetic testing.

CT he expression vector or the reagent is useful in preparing a medicament control systems. The fusion protein is useful for generating antibodies against a central nervous system disorder; or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a cuseful in producing and detecting the polymucleotide and dot use in various assay systems. The methods are cuseful in producing to the human CRIK protypeptide and corecting the polymucleotide and polymucleotide sequence represents a DNA sequence corelitating to the human CRIK protein of the invention
New human citron rho/rac-interacting kinase (CRIK) polypeptide and polymucleotide, useful in preventing, ameliorating or treating diseases associated with human CRIK dysfunction, e.g. obesity, diabetes or

                                                                                                                                                                                                                                 The invention relates to human myotonic dystrophy type protein kinase (MDPK) polypeptides designated as 13245 and nucleic acid molecules encoding such polypeptides. 13245 molecules are used to develop diagnostic and therapeutic agents for prognosticating, diagnosing, preventing, inhibiting, alleviating or curing MDPK-related disorders. Polypeptides of the invention are used to develop diagnostic and therapeutic agents for 1345-mediated or related disorders uch as tumour growth, tumour metastasis, viral infection of a cell, skeletal muscle disorders (e.g. muscular and myotonic dystrophies), immune disorders and neoplastic disorders. The invention is also used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           72

Human MDPK cDNA.

ò 셤

Human, myotonic dystrophy type protein kinase; MDPK, 13245 protein; tumourigenesis; tumour growth; tumour metastasis; viral infection;

```
The present invention relates to a method for identifying a compound capable of modulating pain or painful disorders. The method comprises sasaying the ability of the compound to modulate specific nucleic acid expression or polypeptide activity eg. potassium channel, or kinase expression/activity. The method and compounds are useful for treating pain or painful disorders e.g. inflammatory pain, chronic pain, neuropathic pain, causalgia, fibromyalgia, cancer pain, migraine/headache pain and tissue pain. The present sequence encodes a human protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CCCATTGCCAGCCCGGGCCTCCAGGCTGAATCTGTTCTTCCAGGGGAAACCACCCTTTATG 132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                              1 ggggagatgttgaagttcaa......tctgagccgcctgatccgta 151
